Rittal – The System.

The whole is more than the sum of its parts.

The same is true of “Rittal – The System.” With this in mind, we have bundled our innovative enclosure, power distribution, climate control and IT infrastructure products together into a single system platform. Complemented by our extensive range of software tools and global service, we create unique added value for all industrial applications: Production plant, test equipment, facility management and data centres. Following our simple principle, “faster – better – worldwide”, we combine innovative products with efficient service for optimum results.

Faster – with our “Rittal – The System.” range of modular solutions, which guarantees fast planning, assembly, conversion and commissioning thanks to system compatibility.

Better – by being quick to translate market trends into products. In this way, our innovative strength helps you to secure competitive advantages.

Worldwide – thanks to global networking across 150 locations. Rittal has over 60 subsidiaries, more than 250 service partners and over 1,000 service engineers worldwide. For more than 50 years, we have been on hand to offer advice, assistance and product solutions.

We set standards – RiMatrix S.

Rittal opens up brand new perspectives for the IT world.

- Standardised, mass-produced data centre modules
- Only one item number
- Fully functional including server and network racks, climate control, power distribution and back-up, monitoring and DCIM (Data Center Infrastructure Management)
- Available for immediate delivery

The revolutionary alternative to individual data centre construction:
RiMatrix S

Advice and decision-making

RiMatrix S is based on ingenious data centre modules with defined interfaces for power, cooling and monitoring, dimensions and functions. This considerably reduces the amount of planning work required:

- Simple selection of the required modules
- Fast integration into an existing supply infrastructure
- Complete ROI calculation including planning expenditure, investments, operating costs, personnel and servicing
- Defined parameters for scalability, availability, efficiency and performance
- Data centre automation through monitoring and controlling

For you, this translates into a host of benefits in terms of investments, operating costs, future-proofness and scalability.

Delivery and commissioning

All data centre modules are pre-manufactured, available ex works, and designed for rapid configuration of a customised solution:

- Short delivery times
- Very fast commissioning
- Complete documentation of the data centre module at the time of handover
- Simplified final certification of the ready-to-use data centre at the customer's premises

Better.

RiMatrix S provides peace of mind, thanks to:

- Reduced complexity
- Tested, quality-verified components
- Defined, monitored production processes
- Documented system test of the entire data centre module

For you as the user, this translates into:

- Low investment costs
- PUE (Power Usage Effectiveness) up to 1.15
- Tested characteristic curves and data sheets
- Precertification of the data centre modules by TÜV Rheinland

RiMatrix S Single 6/Double 6

- Space-saving climate control in the raised floor
- Two separate, optimised climate zones for the server and technical area
- Consistent separation of cold air intake and warmer exhaust air integrated into the mechanical concept
- Cable routes at the top
- 6 server racks, 1 network rack
- UPS, battery rack and distribution enclosure
- In the Double 6, the second module is a mirror image

ENCLOSURES

CLIMATE CONTROL

FRIEDHELM LOH GROUP

The system.

RiMatrix S data centre modules are ready to use immediately. Depending on whether there is a central UPS infrastructure available, the modules RiMatrix S Single 6/Double 6 or RiMatrix S Single 9/Double 9 are used.

RiMatrix S Single 9/Double 9

- When using a central UPS
- One climate zone for the server area
- Aisle containment
- Raised floor
- Climate control in the raised floor
- Cable routes at the top
- 8 server racks, 1 network rack
- Distribution enclosure
- In the Double 9, the second module is a mirror image

Make IT easy.

All Rimatrix S modules may be scaled to almost any output between 60 and 450 kW. Only the container solution is limited to scaling with the Single 6/Single 9 modules, due to the spatial conditions inside the containers.

Examples:

- Simple assembly of chessboard-like structures
- Parallel or serial arrangement
- Shared cold aisle and/or hot aisle
- Simple connection to supply infrastructures

FRIEDHELM LOH GROUP

System accessories – Cooling.

ZUCS (Zero U-Space Cooling Systems) are provided for climate control, so that no installation space for servers is lost.

- The heat exchangers are located beneath the racks.
- The heat exchanger connection is easily accessible via the raised floor behind the racks.
- The n+1 redundancy allows a high level of availability, i.e. even if one ZUCS should fail, the required cooling output is still provided.
- EC fans ensure a low energy consumption, and the system is dimensioned to enable operation in energy-saving part-load mode.
- The fans are arranged in front of the server racks in the raised floor, in a maintenance-friendly configuration.
- Intelligent air routing guarantees optimum operation.

IT cooling. Liquid Cooling Package LCP.

High efficiency with optimum performance

Climate control of your data centre is particularly vital in terms of availability and energy costs. With the special Rittal liquid cooling concepts, we develop and implement high-efficiency climate control solutions on your behalf. Thanks to their intelligent control and the option of flexible expansion with additional fans, these can offer energy savings of up to 50%. This translates into savings with rack- and suite-based cooling solutions, both in terms of investments costs as well as energy and operating costs. You also help to protect the environment with resource and CO₂ savings.

Water-based cooling solution

Rack cooling

Data centres support corporate processes at ever-higher outputs. The packing density in computer systems is increasing, and processor capacity is growing. This leads to a continuous rise in heat development. Keep temperatures at a constant level with the highly efficient Rittal Liquid Cooling Packages (LCP). With optimised operating costs, our LCPs precisely and effortlessly dissipate heat losses of up to 24 kW per enclosure.

LCP Rack T3+, CW

- Redundant heat exchanger unit with two active water circuits (A/B medium supply)
- Redundant power infeed (A/B power supply) with automatic changeover in case of an emergency
- Fully redundant cooling output of 24 kW
- Redundant fan design
- Integrated controller with its own web server for network and BMS interfaces
- Auto-load balancing function
- Auto-recovery function
- Energy saving with high water inlet temperatures (more free cooling)
- Minimised operating costs with efficient EC fan technology
- Integration into RiZone (data centre management software)

Water-based cooling solution

Rack cooling	Suite cooling
<p>Data centres support corporate processes at ever-higher outputs. The packing density in computer systems is increasing, and processor capacity is growing. This leads to a continuous rise in heat development. Keep temperatures at a constant level with the highly efficient Rittal Liquid Cooling Packages (LCP). With optimised operating costs, our LCPs precisely and effortlessly dissipate heat losses of up to 55 kW per enclosure.</p>	<p>Bayed suite cooling with the Rittal LCP Inline is extremely powerful, and the ideal climate control solution for exceptionally high cooling demands, particularly when the cooling of server racks cannot be achieved via the room climate control. Alternatively, bayed suite cooling can be used to support the existing climate control system in the room or for transforming existing structures into server rooms. A raised floor is not necessary for the operation of suite cooling.</p>
<p>LCP Rack CW</p> <ul style="list-style-type: none"> ■ Cooling output from 10 kW to 55 kW ■ Energy saving with high water inlet temperatures (more free cooling) ■ Minimised operating costs with efficient EC fan technology ■ Spatial separation of cooling and server rack ■ Integral condensate and leakage management ■ Sophisticated control concept including online connection ■ Optional cooling of one or two server racks ■ Simple representation of redundancies ■ Assembly- and service-friendly ■ Integration into RiZone (data centre management software) 	<p>LCP Inline CW</p> <ul style="list-style-type: none"> ■ Cooling output from 10 kW to 55 kW ■ Cooling of several server racks ■ Energy saving with high water inlet temperatures (more free cooling) ■ Minimised operating costs with efficient EC fan technology ■ Spatial separation of cooling and server rack ■ Integral condensate and leakage management ■ Sophisticated control concept including online connection ■ Assembly- and service-friendly ■ Optional front cover to reduce the air outlet speed and for superior air distribution ■ Increased performance and efficiency in conjunction with Rittal aisle containment ■ Integration into RiZone (data centre management software) ■ Variant set forward for ideal air distribution (cold air curtain) ■ Flush variant for confined spaces (narrow cold aisle)

Coolant-based cooling solution

Rack cooling

Whether rack-based cooling of one or two server racks, or suite cooling with aisle containment. LCP Rack DX or LCP Inline DX are the ideal cooling solution for small to medium-sized IT installations. In particular, the stand-alone IT application is easily cooled with these devices.

Whereas in the past, cooling of stand-alone IT applications led to difficulties with conventional ceilings or air-conditioning units, the LCP DX devices support IT-compatible cooling. For retrofitting or exchanges, the existing coolant pipework can often be reused.

LCP Rack DX

- Cooling output 12 kW
- Refrigerant R410a
- Minimised operating costs with efficient EC fan technology
- Spatial separation of cooling and server rack
- Integral condensate and leakage management
- Sophisticated control concept including online connection
- Optional cooling of one or two server racks
- Simple representation of redundancies
- Assembly- and service-friendly
- Integration into RiZone (data centre management software)
- Cost-effective installation by laying small-diameter coolant lines

Coolant-based cooling solution

Suite cooling

Whether rack-based cooling of one or two server racks, or suite cooling with aisle containment, LCP Rack DX and LCP Inline DX are the ideal cooling solution for small to medium-sized IT installations. In particular, the stand-alone IT application is easily cooled with these devices.

Whereas in the past, cooling of stand-alone IT applications led to difficulties with conventional ceilings or air-conditioning units, the LCP DX devices allow IT-compatible cooling. For retrofitting or exchanges, the existing coolant pipework can often be reused.

LCP Inline DX

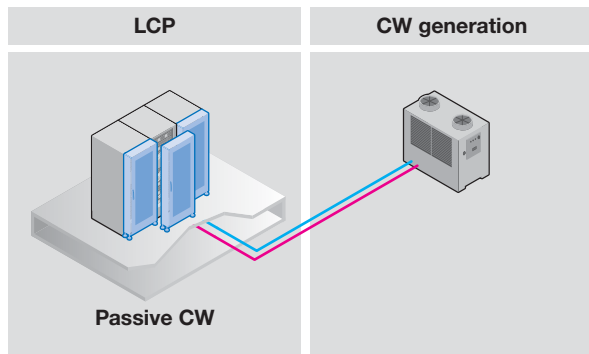

- Cooling output 12 kW
- Cooling of several server racks
- Refrigerant R410a
- Minimised operating costs with efficient EC fan technology
- Spatial separation of cooling and server rack
- Integral condensate and leakage management
- Sophisticated control concept including online connection
- Assembly- and service-friendly
- Optional front cover to reduce the air outlet speed and for superior air distribution
- Increased performance and efficiency in conjunction with Rittal aisle containment
- Integration into RiZone (data centre management software)

Water-based fanless cooling solution

Rack cooling

The fans in the IT equipment independently guide the warm air over the high-capacity heat exchanger. The entire data centre functions as a cold aisle, and there is homogeneous temperature distribution. The LCP Passive creates a very large, effective heat exchanger surface area in the data centre which facilitates high water inlet temperatures and a high proportion of free cooling.

LCP Passive CW

- High cooling output of 20 kW in a minimal space
- Easily exchanged for the standard rear door of the server enclosure
- Retrofitting is not a problem
- A door opening angle of 120° allows rear access to the server enclosure and makes assembly and configuration inside the enclosure easier
- The LCP does not have its own fan, and therefore does not need an integrated control
- Maximum energy efficiency, as there is no electrical power consumption whatsoever

LCP – Liquid Cooling Package CW

Accessories from page 48

Benefits:

- Maximum energy efficiency thanks to EC fan technology and IT-based control
- Minimal pressure loss at the air end, which in turn minimises the power consumption of the fans
- Optimum adaptability thanks to dynamic, continuous control of the cold water volume flow
- Using high water inlet temperatures increases the proportion of indirect free cooling, which in turn reduces operating costs
- Targeted cooling output thanks to modular box-type plug-in fan units

- Box-type plug-in fan units configurable as n+1 redundancy
- Standard 3-phase connection for electrical redundancy
- With redundant temperature sensor integrated at the air end as standard
- The separation of cooling and rack prevents the ingress of water into the server enclosure
- Up to 55 kW cooling output on a footprint of just 0.36 m²
- Minimal area load thanks to low weight
- Touchscreen display may be retrofitted

Monitoring:

- Monitoring of all system-relevant parameters such as:
- Server air intake temperature
 - Server waste air temperature
 - Water inlet/return temperature
 - Water flow
 - Cooling output
 - Fan speed
 - Leakage
 - Optional sensors
 - Direct connection of the unit via SNMP over Ethernet
 - Integration into RiZone (data centre management software)

Application and mode of operation:

The LCP draws in the air at the sides at the rear of the server enclosures, cools it using high-performance compact impellers, and blows the cooled air back into the front part of the server enclosure at the sides.

LCP – Liquid Cooling Package CW

Accessories from page 48

Benefits:

- Maximum energy efficiency thanks to EC fan technology and IT-based control
- Minimal pressure loss at the air end, which in turn minimises the power consumption of the fans
- Optimum adaptability thanks to dynamic, continuous control of the cold water volume flow
- Using high water inlet temperatures increases the proportion of indirect free cooling, which in turn reduces operating costs
- Targeted cooling output thanks to modular box-type plug-in fan units
- Box-type plug-in fan units configurable as n+1 redundancy
- Standard 3-phase connection for electrical redundancy
- With redundant temperature sensor integrated at the air end as standard
- The separation of cooling and rack prevents the ingress of water into the server enclosure
- Up to 55 kW cooling output on a footprint of just 0.36 m²
- Minimal area load thanks to low weight
- Touchscreen display may be retrofitted

Monitoring:

- Monitoring of all system-relevant parameters such as:
- Server air intake temperature
 - Server waste air temperature
 - Water inlet/return temperature
 - Water flow
 - Cooling output
 - Fan speed
 - Leakage
 - Optional sensors
 - Direct connection of the unit via SNMP over Ethernet
 - Integration into RiZone (data centre management software)

Note:

- Height 2200 mm available on request.

Photo shows a configuration example with equipment not included in the scope of supply.

Application and mode of operation:

The LCP is designed for siting within a bayed enclosure suite. The hot air is drawn in from the room or hot aisle at the rear of the device and expelled at the front into the cold aisle after cooling. The LCP achieves maximum performance and efficiency in conjunction with aisle containment. A raised floor is not required.

Colour:

LCP – Liquid Cooling Package CW

Accessories from page 48

Benefits:

- Error-tolerant, efficient cooling of server racks with high thermal loads
- Fully redundant – Two active cooling circuits and two switchable power circuits ensure optimum fail-safeness
- The built-in controllers are capable of adapting all device parameters automatically to preserve the required climate conditions

- A separate decentralised intelligence which automatically recognises emergency situations and responds appropriately with the “auto-load balancing” and “auto-recovery” functions
- Interfaces which facilitate user-friendly operation and monitoring via the network or BSM systems

Optional:

- Fully integrated fire detection and extinguisher system
- Automatic server enclosure door opening
- Various sensors

Colour:

- RAL 7035

Protection category:

- IP 40 to IEC 60 529

Application and mode of operation:

The LCP draws in the air at the sides at the rear of the server enclosures, cools it using high-performance compact impellers, and blows the cooled air back into the front part of the server enclosures at the sides.

Auto-recovery	■

LCP – Liquid Cooling Package CW

Accessories from page 48

Benefits:

- High cooling output of 20 kW in a minimal space
- Easily exchanged for the standard rear door of the server enclosure
- Retrofitting is not a problem
- A door opening angle of 120° allows rear access to the server enclosure and makes assembly and configuration inside the enclosure easier

- The LCP does not have its own fan
- Maximum energy efficiency, as there is no electrical power consumption whatsoever

Application and mode of operation:

Air/water heat exchanger mechanically integrated into a rear door for server enclosures. The 482.6 mm (19") equipment built into the server enclosure must have suitable airflow capabilities in order to route the heated waste air through the heat exchanger rear door. The waste air is cooled down to room temperature. The heat energy absorbed by the water is transported to the external cold water supply, where it is cooled back down to the required inlet temperature.

Colour:

– RAL 7035

Dimensions mm	W x H x D	600 x 2000 x 170
Usable U		42
Useful cooling output		up to 20 kW

LCP – Liquid Cooling Package DX

Accessories from page 48

Benefits:

- Maximum energy efficiency thanks to EC fan technology and IT-based control
- Minimal pressure loss at the air end, which in turn minimises the power consumption of the fans
- Control of the server inlet temperature
- Thanks to the speed-regulated compressor, the cooling output is ideally adapted to actual requirements
- With redundant temperature sensor integrated at the air end as standard

- Absorbed thermal energy is emitted to the ambient air at the external condenser location, without heating up the installation room
- Ideal for IT cooling in small and medium-sized locations
- Humidifier, reheater or condensate pump available on request
- Higher cooling outputs available on request
- Specific maintenance of the LCP DX thanks to separation of cooling and server rack

Functions of the LCP Rack DX:

The LCP draws in the air at the sides at the rear of the server enclosures, cools it using high-performance compact impellers, and blows the cooled air back into the front part of the server rack at the sides.

Functions of the LCP Inline DX:

The LCP is designed for siting within a bayed enclosure suite. Hot air is drawn in from the room or hot aisle at the rear of the device, cooled by the high-capacity compact impellers, and blown back into the room or cold aisle after cooling.

	800	1	3301.320

Connection hose, bottom and top

Flexible connection hose, may be cut to required length, including union nuts on both sides for connecting the LCP to existing pipework.

For LCP CW	Thread	Water connection from	Packs of	Model No.
3311.130 3311.230 3311.260 3311.530 3311.560	1 1/2"	bottom/top	2	3311.040

Rear adaptor

for LCP Inline

May be positioned to the rear of the set forward LCP Inline to close the existing gap in the rear section.

For LCP	Packs of	Model No.
3311.530 3311.560	1	3311.080

SNMP card

SNMP card as an accessory for connecting LCP Rack/Inline DX units to the network.

For LCP DX	Packs of	Model No.
3311.410 3311.420 3311.430 3311.440	1	3311.320

Accessories for LCP CW/DX

Fan module

for LCP

To increase the cooling output, individual fan modules may be retro-fitted into the LCPs. Additional integration can also achieve redundancy or reduce the electric power consumption of the LCPs.

For LCP	Packs of	Model No.
3311.130, 3311.230, 3311.260, 3311.530, 3311.560	1	3311.010

The LCP 3311.130/.230/.530 (max. 30 kW) is supplied with one fan module as standard.

To achieve the max. cooling output of 30 kW, the customer/service needs to install two additional fan modules.

The LCP 3311.260/.560 (max. 55 kW) is supplied with four fan modules as standard.

To achieve the max. cooling output of 55 kW, the customer/service needs to install two additional fan modules.

Fan module

for LCP

To increase the cooling output, individual fan modules may be retro-fitted into the LCPs. Additional integration can also achieve redundancy or reduce the electric power consumption of the LCPs.

For LCP	Packs of	Model No.
3311.540	1	3311.011

Supplied as standard with two fan modules.

To achieve the max. cooling output, the customer/service needs to install two additional fan modules.

CLIMATE CONTROL

FRIEDHELM LOH GROUP

Security safe as a compact data centre.

Maximum protection in a minimal space

Rittal's portfolio contains the right protection concept for every business security requirement. Like security rooms, security safes provide optimum protection against potential physical threats to your IT applications. From Level A compact safes through to Level E modular safes, we have the perfect solution for your specific security requirements. The compact safes offer an optimum protection concept for small and medium-sized enterprises in particular, by providing a physical cover for individual server racks. Features such as modularity and extendibility guarantee investment security and flexibility, making them ideal for use in decentralised IT locations or for back-up applications in companies.

Rittal – The System.

Faster – better – worldwide.

Security safe as a compact data centre.

In addition to the physical cover in the form of an IT security safe, the configuration components listed below complement the Rittal safe and transform it into a fully fitted compact data centre.

- Robust, flexible racks especially for server and network technology
- Efficient climate control solutions in a range of designs and outputs
- IT-specific power distribution
- Networkable monitoring and security solutions with the CMC III system
- Early fire detection and automatic rack extinguishing

Benefits of security safes

Level E modular safe	
<ul style="list-style-type: none"> ■ Complete solution in the smallest possible space and in next to no time ■ No need for expensive upgrades to existing premises ■ Efficient cooling and extinguishing solution 	<p>High level of protection for your IT</p> <ul style="list-style-type: none"> ■ Maximum security in the Rittal range of safes ■ Optimum protection concept for one or more server rack solutions for small and medium-sized enterprises ■ Modular layout for installation in hard-to-access locations and for retrospective enclosure of existing IT structures ■ Future-proof investment thanks to the options of extendibility, dismantling and re-assembly ■ System-tested security and a high level of protection; testing has been carried out by accredited institutes and confirmed with test reports ■ Modified air baffle plates for optimum air routing, for efficient cooling of the safes

Benefits of security safes

Level B modular safe

Solid protection for your IT

- Optimum protection concept for a server rack
- Modular layout for installation in hard-to-access locations
- Form-fit connection with the stable TS 8 framework structure
- Front and rear 482.6 mm (19") level of the TS IT rack already included with the supply
- Lower weight than the Level E modular safe
- Tested security – testing has been carried out by accredited institutes and confirmed with test reports.

Level A compact safe

Solid protection for small IT applications

- Ready-installed safe as a complete system
- Integral cooling
- Integral TS 8 frame structure with front and rear pairs of 482.6 mm (19") mounting angles
- Base/plinth with ground clearance
- Tested safety – The tests were carried out as system tests and confirmed via test reports

Level E modular safe

Applications:

- A high level of protection against potential physical threats for IT
- Targeted configuration components transform the safe into a complete, compact data centre

Benefits:

- As well as facilitating installation in poorly accessible sites, the modular design also makes it possible to retrospectively enclose existing IT structures.
- Extensibility, dismantling and re-assembly mean targeted, future-safe investments.
- System-tested security and a high level of protection

Protection standards:

- Fire protection – fire resistance class F 90 to DIN 4102 Part 2
 - Compliance with limit values $\Delta T < 50$ K, relative humidity 85% for 30 minutes
 - Burglar resistance WK II, III and IV, tool attack analogous to DIN V ENV 1630/1999-04/ WK II
 - Protection category IP 56 to IEC 60 529
 - Smoke protection based on DIN 18 095-2: 1991-03
- The tests were performed as system tests and confirmed with test certificates.

Material:

- Sheet steel, coated

Colour:

- Enclosure and service door: RAL 7035
- Operator door: RAL 9005

Supply includes:

- Security safe with operator door and service door
- Cable entry in both side elements
- Both doors with key lock

Optional:

- Choice of door hinges
- Bifold doors
- Different cable entry systems
- Cable entry additionally in the top or base unit
- Different lock variants
- Supporting structure

■ Included with the supply □ Optional

Level A compact safe

Applications:

- Protection for servers and storage applications
- Protection for business-critical data
- Storage of personal data, e.g. doctors' surgeries or tax advisors

Benefits:

- Complete system with built-in cooling and 482.6 mm (19") rack
- High level of operational and service-friendliness thanks to the two-door system
- Compatibility with other infrastructure elements

Protection standards:

- Fire resistance class F 90 to DIN 4102 Part 2, compliance with limits $\Delta T < 50$ K, rel. humidity $< 85\%$ over 10 minutes
- Burglar resistance WK II, tool attack analogous to DIN V ENV 1630/1999-04/WK II
- Protection category IP 55 to IEC 60 529

The tests were performed as system tests and confirmed with test reports.

Material:

- Sheet steel, coated

Colour:

- Enclosure and service door: RAL 7035
- Operator door: RAL 9005

Supply includes:

- Security enclosure with operating and service doors (three-point locking)
- Cable entry in both side elements
- Cooling 2.4 kW designed as a split unit

Technical information:

Available on the Internet.

Compact split cooling solution for modular safes

■ The individual systems all have separate, hermetically sealed internal and external circuits. This means that dust and flue gases are unable to ingress the modular safe via the cooling system. The internal and external unit are connected to one another via coolant lines and control cables and shielded for fire protection.

■ Air routing inside the safe is horizontal. Modified air baffle plates ensure targeted air routing. By separating the "cold side" from the "hot side", air short-circuits are avoided, and the efficiency of cooling is enhanced. The compact split cooling solutions are suitable for use in rooms with climate control in the building or adequate ventilation, and low or no noise level requirements. The evaporator coil is fastened to the side panel on the inside of the modular safe, and the external device on the service door.

Split outdoor cooling solution for modular safes

■ When using the outdoor variant, the internal circuit of the cooling unit is secured to the side panel on the inside of the safe. The external unit is positioned outside of the building. The internal and external units are connected to one another via coolant lines and control cables. The hot air from the servers is drawn in at the rear of the safe, and the cooled air is expelled in front of the 482.6 mm (19") level. Benefits of the outdoor model: The waste heat is routed directly to the outside. As a result, room ventilation or air-conditioning is not necessary.

Split outdoor cooling solution with inverter technology

■ The cooling unit with inverter technology allows targeted speed control of the compressor. The coolant volume is regulated via the electronic expansion valve. Adaptation to cooling requirements facilitates energy savings of up to 40%. The cold air is expelled in front of the 482.6 mm (19") level by the internal unit (evaporator coil), while the hot air is drawn in at the rear.

Fire alarm and extinguisher system DET-AC/EFD Plus

Benefits:

- Early fire detection
- Automatic extinguishing
 - Innovative extinguisher gas NOVEC 1230
 - Eco-friendly
 - Uncritical for IT components
- 482.6 mm (19") rack mount with just 1 U

DET-AC Plus

Compact fire alarm and active extinguisher system with smoke extraction system, built into one height unit. The detection system is identical to that used in the EFD Plus system. Fire extinguishing with the extinguisher gas NOVEC 1230 is automatically activated when a main alarm is triggered. With the extinguisher gas supply provided, a volume of up to 3 m³ can be extinguished. The collective fault signal and the alarms may be forwarded to the CMC.

DET-AC Plus slave

In conjunction with the DET-AC Plus slave system, up to five bayed enclosures may be extinguished. In addition to the DET-AC Plus unit, a DET-AC Plus slave unit is used for each additional enclosure and contains the extinguisher gas for one enclosure. The pipework from the DET-AC Plus system is laid in all enclosures to facilitate detection.

EFD Plus

Compact early fire detection system with active smoke extraction system. The integral fan continuously extracts the air from the enclosure, and passes it over two smoke detectors. The first smoke detector is extremely sensitive and triggers a pre-alarm. The second smoke detector triggers the main alarm.

CMC III monitoring system

CMC III monitoring system

The CMC III monitoring system controls physical parameters such as the temperature inside the modular safe.

The user defines limits for the various parameters. These are fully automatically monitored by the CMC. If the limits are exceeded or undercut, the CMC emits an alarm which may optionally be notified via e-mail or SMS.

The system may also be connected to the customer network (via OPC/SNMP) to represent messages or values directly in the control room system (SCADA/BMS/NMS).

The CMC III system is plug & play-ready, sensors are detected automatically, and the Web user interface is easy to use even with no prior knowledge.

The CMC Compact basic unit is available for small monitoring units, and supports the connection of up to four sensors. The CMC III Processing Unit for larger monitoring units supports the connection of up to 32 sensors.

There is a 24 V DC power supply with a redundant design, but power can also be supplied via the integral Power over Ethernet (PoE).

In addition to temperature monitoring, both the alarms and collective fault signal from the fire alarm and extinguishing system, as well as the fault signalling from the climate control system, may be switched to the CMC.

	Packs of	Model No.

Power distribution/supply

PDU Power Distribution Unit

Compact power distribution for modular safe applications

The compact PDU allows any modular safe to be quickly and easily equipped with a professional power distribution system. With this latest generation of modular safes, installation is tool-free and takes just seconds. The required mounting kits and assembly parts are included with the supply. What is more, the required connection cable with integral CEE connectors is already pre-fitted, so that the PDU is ready to use immediately.

Single-phase and 3-phase PDU versions are available with input currents ranging from 16 A to 63 A, so that the correct power distribution is available to suit every rack and its specific energy requirements.

PDU versions – Differences

There are four main PDU variants:

- PDU basic: Robust, compact basic power distributor for the IT environment
- PDU metered:
 - Basic version supplemented by energy measurement per phase and/or infeed
 - Rapid overview of the power requirements of a complete modular safe
- PDU switched: Measurement function per phase/input and individually switchable output slots
- PDU managed:
 - High-end IT rack power distribution
 - Energy measurement function for each individual output and individually switchable outputs. This version supports comprehensive monitoring of each individual output slot, to allow early detection of changes to the current rating or malfunctions in power packs
 - Detailed consumption analyses down to server level, to help reduce energy consumption

PSM – Modular power distribution for modular safe applications

The PSM system offers an optimum IT power distribution system, whose configuration (type and quantity of output slots) may be modified in line with altered requirements at any time, even whilst operational. To this end, a range of plug-in modules (e.g. earthing-pin, EC 60 320, C13/C19, UK plug etc.) is available.

Plug-in modules with the option of switchable individual outputs and PSM blade bars with integral current and output measurement are also available. Data communication and network connection occur via the CMC III. Together with the CMC III and in conjunction with other CMC III sensors e.g. for ambient parameters such as temperature and humidity, this allows you to create a comprehensive monitoring solution for your modular safe.

Note:

See Cat. 33, from page 383.

Power distribution/supply

UPS system PMC 12

The PMC 12 UPS is distinguished by its use of double-conversion technology. Double-conversion technology to the highest classification VFI-SS-111 provides the basis for an optimum supply voltage to all connected loads. This makes the UPS ideally suited for all applications in the IT environment and for other requirements such as automation technology, system control etc. A scalable autonomy of up to 29 minutes at 100% load produces a broad application spectrum.

- With 90° swivellable LCD
- Serial interface and Emergency Power Off (EPO) contact
- Optional SNMP monitoring card
- Batteries "hot swap" compatible, may be exchanged from the front
- External batteries with 4.5 kVA and 6 kVA

Battery ventilation system for installation in Level E, Level B modular safes

The battery pack of the UPS system contains sealed lead gel batteries. According to EN standard 50 272-2, battery systems must be ventilated. Given the high density of the modular safe, battery packs must not be installed in the safes without a ventilation solution.

Rittal offers a suitable ventilation system for the aforementioned battery pack of PMC 12, 4.5 and 6 kVA, for installation in the modular safes. The enclosure has a ventilation system which retains the protection standards of the modular safe. Vented battery enclosure system for one or two battery packs 4 U/8 U available on request.

FRIEDHELM LOH GROUP

The IT security room system.

With Rittal IT security rooms, we offer a targeted spectrum of products for the physical protection of your IT. From server rooms to large data centres, from basic protection to the fulfilment of international high-MTBF standards. System-tested products are tested as a complete structure, taking into account the interactions between all components. During testing, allowance is made for built-in modules such as doors, cable bushing systems and ventilation units. Benefit from multifunctional risk coverage (fire, water, burglary) and compliance with the latest EN and DIN standards. Rittal also offers complete turnkey solutions for climate control, power back-up, monitoring, fire detection and extinguishing, all from a single source.

Targeted physical protection for your IT

Criterion	Standards
System testing	 Testing of the following quality ratings as complete system or structure
Fire protection	 ECB-S certification to EN 1047-2, 50 K temperature increase and 85% rel. humidity up to 24 hours (reheat period), 60 minutes flame impingement time
	50 K temperature increase and 85% rel. humidity without reheat period, 30 minutes flame impingement time
	F 120 to DIN 4102 F 90 to DIN 4102
Corrosive fire gases	Acrid gas-tightness based on DIN 18 095
Falling debris	Shock test of 200 kg
Water	IP x6 to IEC 60 529
Dust	IP 5x to IEC 60 529
Unauthorised access	WK IV to DIN V ENV 1630, door system only
	WK III to DIN V ENV 1630, or DIN V 18 103 (ET2)
	WK II to DIN V ENV 1630
Explosion	Detonation test
EMC	Protection against high-frequency irradiation and radiation

System-tested facilities are tested as a complete construction. This comprises the cellular structure and installation modules such as doors, cable bushing or ventilation units. By contrast, generic component testing only refers to individual parts.

Conventional constructions refer to room structures of plasterboard, concrete and other standard construction materials which do not offer sufficient protection for data centre applications. Conventional constructions are generally unsuitable for use as fire walls, and are therefore only type-tested.

Targeted physical protection for your IT

IT security rooms LER Basic/LER Extend

High security

The security rooms LER Basic and LER Extend offer high-quality, system-tested solutions. As basic and extended solutions, LER Basic and LER Extend are optimum security rooms for the protection of infrastructure components such as extinguisher systems, uninterrupted power supply and climate control.

Your benefits

- System-tested protection
- Multi-functional risk coverage
- Dust- and noise-reduced installation
- Dismantling and reassembly plus expansion = investment security
- Can be adapted for use with other room systems, e.g. LSR 18.6 E

LER Basic protection

- Fire resistance F 90 to DIN 4102, system-tested
- Fire resistance F 120 to DIN 4102, type-tested
- Dust- and watertight to IP 56 to EN 60 529
- Protection against external access – resistance class II to DIN V ENV 1630
- EMC basic protection
- Acrid gas-tightness based on DIN 18 095
- Shock test with 3,000 Nm energy after 30 minutes flame impingement over standard temperature curve

LER Extend protection

- Extended protection for data centres based on the LER Basic
- Fire resistance according to the limits of EN 1047-2, max. 50 K temperature increase and 85% rel. humidity, 30 minutes flame impingement time
- Optionally resistance class III to EN 1630

LER room system construction

- Element core made of thermally effective insulation substance
- Robust, encapsulated sheet steel cassette panels
- Innovative connection technology using patented profile technology
- Use of temperature- and humidity-resistant seals
- Use of fire protection valves and sliding climate control doors (Extend)
- Dismantling and reassembly is possible at any time

Standard protection from:

Fire

Extinguishing water

Corrosive gases

Vandalism

Unauthorised access

Electromagnetic interference

Dust

Falling debris

Theft/burglary

Maximum security

The security room LSR 18.6 E offers maximum physical protection for data centres and IT system locations. The system was certified by ESSA (European Security Systems Association) to ECB-S regulations.

This certification confirms that the LSR 18.6 E meets the requirements of EN 1047-2 without restriction. Moreover, construction of the security room is subject to constant, independent quality monitoring.

Your benefits

- System-tested high-MTBF protection
- Multi-functional risk coverage
- Dust- and noise-reduced installation
- Dismantling and reassembly plus expansion = investment security
- ECB-S certification
- Independent quality monitoring
- Can be adapted for use with other room systems, e.g. LER Basic/Extend

LSR 18.6 E protection

- Fire resistance to quality class R60D to EN 1047-2 (fire resistance testing, shock testing, floor testing), system-tested
- Fire resistance EI 120/F 120 to EN 1363/DIN 4102, type-tested
- Protection against external access – resistance class WK III to EN 1630 system-tested for cellular structure and its built-in modules
- Extended protection against external access WK IV to EN 1630 for high-security door
- Protection against standing water, 72 h, 40 cm, maximum 20 drops
- Explosion testing subject to detonation test of 200 kg TNT from 40 m
- Protection against falling debris
- Dust- and water-tight to IP 56, category 1 (underpressure) to IEC 60 529
- EMC basic protection
- Optionally extendible EMC shielding to BSI TL-03304, including a shield attenuation measurement to IEEE standard 299
- Acrid gas-tightness based on DIN 18 095

LSR 18.6 E construction

- Complex 4-layer element core made of thermally effective insulation substances
- Robust, encapsulated sheet steel cassette panels
- High-security door, ECB-S tested, multiple lock, with panic release
- Patented connection system
- Fireproof floor elements
- Use of extremely temperature- and humidity-resistant seals
- Use of climate control dampers and cable bushing systems
- Dismantling or reassembly is possible at any time

Standard protection from:

Fire

Extinguishing water

Corrosive gases

Vandalism

Unauthorised access

Electromagnetic interference

Dust

Explosion

Falling debris

Theft/burglary

Mechanical access

Protection for your IT systems

Are you aware of the weak points in your IT systems? Are you aware of the dangers they are exposed to? It is vitally important for your company to have all data permanently available, and to be able to process it at all times.

Rittal offers cost-effectively expandable designs and structures, with ecologically and economically optimised data centres offering a host of other benefits.

Your benefits

- Protection ranging from basic protection to high-MTBF
- Simple, flexible integration into existing building structures
- Expandability and lasting cost-effectiveness
- Optimum space utilisation, thanks to the flexible modular system
- Flexibility, by enclosing existing IT and infrastructure solutions
- System-tested protection from potential physical threats
- Room-within-a-room concept with the associated depreciation benefits
- Compatibility with cross-facility IT infrastructures
- High level of pre-manufacturing – fast assembly times
- May be constructed and extended with the IT systems operational

An ECB-S certified solution offers more than a type-tested solution

As one of the leading suppliers of security rooms, Rittal has received ECB certification for its security room LSR 18.6 E.

With this certification, the European Certification Body GmbH (ECB) confirms that the Rittal IT security room fully complies with the criteria set by the European standard EN 1047-2.

The prerequisite for ECB-S certification is a system-tested room. This includes testing the walls, the ceiling and the floor, as well as the door and the cable bushing, as a system-tested room with all transitions. During a fire resistance inspection, criteria such as temperature increase and relative humidity are evaluated. The room is also subject to a shock test, which simulates falling components.

Rittal is a professional supplier, backed up by many years of expertise. The ECB-S certified solutions have been in place since 2003, and are constantly being adapted to the optimised requirements of EN 1047-2.

Benefits of ECB-S certification

- System-tested room
- Optimum quality protection thanks to independent quality monitoring
- Improvement in the rating situation for loan applications and residual risk insurance
- Transparency for banks and insurance companies
- Compliance with European standards on IT protection

IT INFRASTRUCTURE

SOFTWARE & SERVICES

System-tested accessories

For IT security rooms

Door and access systems

Rittal IT security rooms are equipped with security door systems. These vary depending on the room system, ranging from the LER Basic, to the LER Extend through to the LSR 18.6 E. In order to provide the highest level of security, the security door system displays the following features.

The security door system features a highly fire-resistant, multi-walled steel door panel with surrounding door frame and all-round fire and seal fold. The door rebate area includes hollow-body rubber gaskets and expanding high-temperature seals, among other features. The lock system, which is equipped with a high-security bolt mechanism, locking bolts and panic release, is an essential component. The high-security bolt mechanism has a lock housing seat. Anyone still in the room in the event of an alarm (while the door is closed) can leave at any time by using the standardised panic release.

Door closing delay

An automatic door closing delay time in the event of an alarm can be adjusted.

Door monitoring systems

The floating contacts of the door monitoring systems are provided in a VdS interface distributor.

Door signal contact

There is a door signal contact for displaying the door opening status remotely, e.g. for routing a signal to a security control centre.

Bolt mechanism monitoring

There is a latch monitoring option for monitoring the bolt mechanism's lock bolts, e.g. for routing a signal to a burglar alarm system or security control centre.

Cable bushing systems

For larger quantities of cables or plug-in cable harnesses with large cross sections (e.g. bulk storage systems/peripherals).

For routing:

- mains supply cables
- signal and control lines of door and damper systems
- data and control lines of the customer's infrastructure

Variants:

- Hard duct systems DN 200 or KS-B
There is an enhanced level of protection against tampering in the vicinity of the cable entry.
- Round duct DN 200
Filled with sealing modules. For on-site cables, pipes and cable routes.
Also for retrofitting data and power supply cables.
- Hard duct KS-B open at the bottom
For installing a security room on top of the customer's existing data and power supply cables. Closed with sealing modules.
- Soft duct
Basic configuration. Filled with flexible sealing material. Also for retrofitting data and power supply cables.

Note

- It is recommended that closing of the duct systems is carried out by authorised Rittal professionals.
- Other hard and soft duct systems are optional, depending on the requirements profile and the security room equipment.

Climate and overpressure control dampers

For the closure of openings for fire prevention. Made from highly fire-resistant materials. Closure of the damper is current-independent.

Climate control dampers

With electromagnetic drive.

Overpressure control dampers

With electropneumatic drive. In the event of an alarm, the pressure is discharged by briefly opening the damper. Integration into the fresh air supply is also possible.

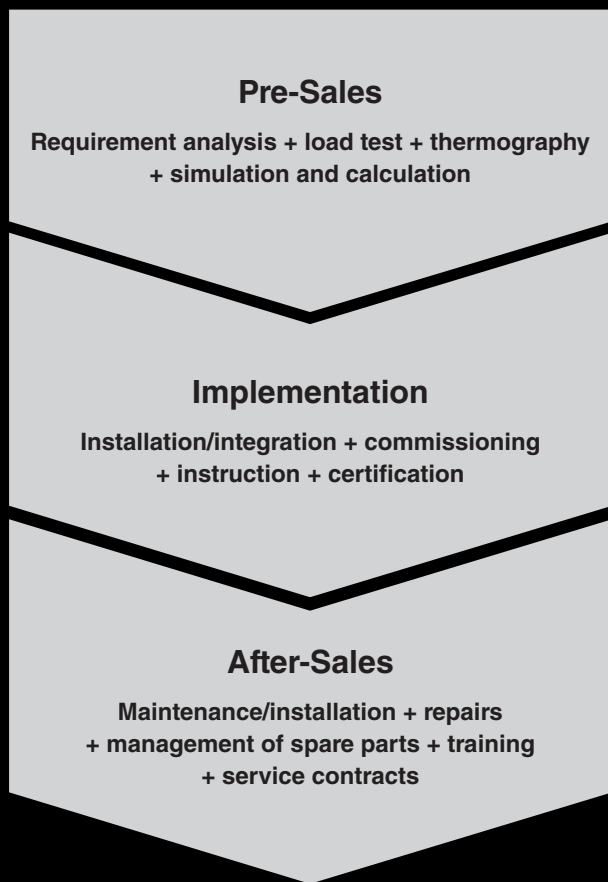

Fire protection valves

For the closure of openings in the security room for fire prevention. With highly effective seals for optimal closing of the valve.

- With electrical drive system (ventilation):
for closing ventilation and air-conditioning openings.
- With pneumatic drive system:
for overpressure discharge and for flue gas disposal.

Engineering, service & support

Rittal International Services

- Installations are carried out by internationally trained staff (Haiger training centre, SuperVisor system)
- Experienced staff with many years of expertise are constantly travelling all over the world
- Quality management (independent testing by outside experts, as well as internal quality testing covering laboratory and production inspections through to cross-facility system acceptance)
- Proven expertise in all areas (research and development, purchasing, sales, project planning, project management, servicing)

Security rooms and IT infrastructures

A perfect IT environment provides the basis for perfect business. Rittal designs, builds and optimises data centres on your behalf, thereby making an effective and efficient contribution to your corporate success. We will advise you, agree the details with you, and develop solutions that fit, down to the smallest detail.

ENCLOSURES

FRIEDHELM LOH GROUP

The benefits to you:

- You benefit from the integrated options offered by a full-range supplier.
- From the initial draft, through to the implementation phase and commissioning, you only deal with one point of contact.
- Your data centre project is clearly structured for your convenience.
- All participants and components are precisely coordinated and attuned with the project goals.
- Every detail contributes to the high overall performance capability of the system.

Rittal endorses the European Code of Conduct and strives consistently to achieve its goals.

1 Data centre construction

- Cross-facility engineering for implementing complete data centres (modularity, scalability, availability)
- Project and process management of the entire workflow
- Handling of all licensing procedures (construction applications, statics and other approvals)
- Preparation of various certifications, including the relevant international certificates (safety, energy efficiency, availability)

1 2 3 RiMatrix IT infrastructures

- Standardised server racks and network enclosures
- Scalable IT cooling concepts
- Modular power distribution and back-up
- High-MTBF IT security rooms, including certificates
- Complete system accessories for IT environments and data centres
- Software-based IT and infrastructure management system
